                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The termination codon of subunit A2 overlaps the initiation codon of subunit B by 4 bp. The correct translation of the 2 subunits is the result of a shift in reading frames at this junction. Previous protein structural analysis has shown that the A2 subunit is bound to a precursor of the A subunit. Therefore, the 'met' at position 1 is not an initiator.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         enterotoxin.
